

# Engage Modeler

## DATASHEET

**Engage Modeler is a Business Process Mapping (BPM) Software tool. Using this powerful yet easy to use tool, Business Process Owners or Subject Matter Experts can create multiple business scenarios defining the 'as is' versus various 'to be' processes for analysis, discussion and documentation.**

Engage Modeler provides separate visual interpretations of every discussion thread within a Business Process. Workshops can quickly capture and display entire scenarios graphically, including responsibility by Job Role with estimated timings.

Combining the visual and notes, Engage Modeler adds tangible value to existing, sometimes cumbersome, business process methodology. The tool allows you to interactively map and evaluate processes with Business Process Owners, and make improvements, all in one single session.

### Key Features

#### Intuitive User Interface

Unique single screen interface, allowing you to work on the process model without the need to move through pages or post-it notes. Workshop participants can follow exactly what is being discussed and agreed.

#### Syntax Engine

This guarantees that your process is always correct, ensuring that there are no infinite loops, open ends or floating processes.

#### Evaluation and Simulation

A powerful analysis engine is built into the single user interface, allowing you to perform "What-if" scenarios without having to switch to worksheets. This enables you to immediately see the impact of team suggestions.

Engage Modeler is available in a Windows Version for the PC or as "SaaS" via the web. The ease of use and functionality of these two versions is the same.

It is easy to share your results and models with anyone in your organisation as Engage Modeler includes communication links with other standard software including Microsoft Word, Excel, PowerPoint, Visio and Workflow Foundation. It also links into content development tools such as UPK and STT.

**Engage Repository** is the optional server product that enables collaboration within your organisation. This includes functions such as version control, authorisation and central storage.

**Engage Viewer** allows you to publish process models from Engage Modeler to the internet, instantly. The Digital Process Handbook that is created becomes a dynamic and real time tool which can contain links to specific process steps within particular applications.

### About Larmer Brown

Larmer Brown's primary business objective is to help organisations realise the desired business benefit from their software applications, through successful User Adoption Programmes. Using a variety of renowned content development tools, we have been providing business transformation, documentation and training services since 1994.

Larmer Brown is an approved Reseller and Services Partner for Engage Software BV.
